

“We had zero product faults with the WBC gear which was great given the product (competitor) we used on Tower 1 had 20+ faults.”

Project Manager – KLM Electrical

727 Collins Street Tower 2

727 Collins Street (Tower 2) will set the standard for commercial office space in the Melbourne CBD.

The 38-storey office tower is the second of 5 towers in total that are planned for the new commercial precinct. It will be recognised as Grade A quality office space and has been designed to achieve a 5 Star Green Star Design.

The project scope included 6,880 total fittings across 23 floors scheduled for 11 separate deliveries over a 7 month period. On this project there were zero product failures and zero late deliveries or short delivered orders!

MyModularMarked up drawings designed in advance in conjunction with Project Manager to ensure the most effective and affordable design was applied.

“The gear goes in really quick and there are always cases where you need to change things after already having installed them and the WBC gear is so easy to modify or re install. It saved us a lot of time.”
