

*“MyModular’s ELV temporary lighting system has enabled our team to ensure sufficient lighting as been provided throughout the construction of the 1 Denison Street project”*

Brendan Parameter  
Site Manager – Star Group

## 1 Denison Street Temp. Lighting

The 37-level commercial office tower at 1 Denison St, is the largest and tallest building within the North Sydney CBD. Over 60,000sqm of premium office space as well as a two-level lifestyle precinct and carparking for 225 cars.

MyModular ELV-Lite was chosen by Star group to service the temporary construction lighting required for the 1 Denison street project.

The ‘plug and play’ modular cabling system, extra low voltage control boards and extra low voltage light fittings created greater flexibility and faster installation of temporary lighting on site. The safety feature of the ELV lite board eliminated any overload risk and provided real time feedback for the installation.

MyModular’s new ELV flood lights were used to illuminate big spaces and reduced the total number of lights required in those spaces. Star- Group will recycle these products in their future projects.

*“The ELV ‘plug and play’ feature makes for a fast and safe install with a minimum of fuss”*
