

“It’s an asset to our business to have such a cost competitive, locally owned company who manufacture in Australia.”

Phil Hooper
Construction Manager – Stowe Australia

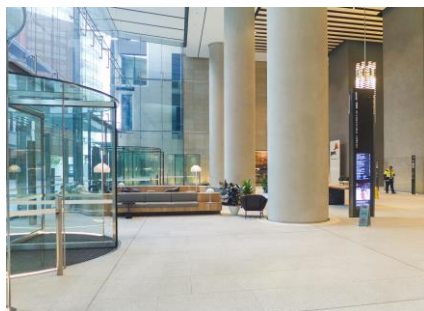

Barangaroo (International Towers Sydney)

The Barangaroo project is Sydney’s largest urban renewal project and one of the most significant waterfront transformations currently underway in the world. Collectively offering 280,000sqm of office space accommodating up to 23,000 workers, all three towers offer 6 Star Green star ratings. MyModular products have been installed in both base building and multiple tenancy fitouts across the three office towers.

The project scope included more than 50,000 DALI light fittings, across 130 floors in total. A combination of WireByClick 3PIN and 5PIN modular lighting loom solutions were supplied for all general lighting throughout. As part of the process, MyModular completed detailed marked up drawings complete with a bill of materials for each floor. Products were locally made and supplied within 3-4 weeks of receiving purchase orders.

“Throughout the quoting, design, shop drawing and delivery processes MyModular were always efficient, and responsive. Quality of product is very high and all components are pre-tested. Our teams made substantial savings on installation time which, on a project this large and fast, is paramount. The drawings provided made the installation easy as well as quick.”
