

*“A cost saving solution
(and) an investment for
any future alterations ”*

Nathan Hemmings
Project Manager – Stowe Australia

Blacktown Hospital

The Blacktown Hospital redevelopment includes a new 9 story Acute Services Building. The multi-million-dollar building will house a new emergency department, a psychiatric emergency care service, intensive care unit, New birthing wards and paediatric services with dedicated emergency department facilities, Expansion of medical imaging and non-clinical support services, New entry atrium and tunnel connections to the existing hospital buildings and link bridges to the carpark.

The “Wire By Click” lighting products and drawings provided by the team at MyModular, deliver a simple, time and money saving solution, that allows for easy changes and refurbishments in the future. The MyModular product is the first modular wiring solution to be approved by the NSW Health Infrastructure Board for use on their projects including Blacktown Hospital.

“Implementing the Wire By Click system was not only a cost saving solution during our initial installation, but an investment for any future alterations that may be required due to the ease with which modifications can be made.”
