# INNOVATIVE, INTELLIGENT DESIGN

---

The WireByClick solution is far more than an intelligent product design that is fast, simple and safe to use. It is an innovative service solution that incorporates helpful drawings, detailed quotes, local manufacturing and a sophisticated project delivery process to maximise the efficiency of your modular install.

01

02

## 01 / Australian Owned and Designed and Locally Manufactured

WireByClick is proudly Australian owned and operated in an industry dominated by large overseas corporations.

WireByClick fly-leads are manufactured locally which does more than just ensure that jobs are created here in Australia. It also means that our product is manufactured to the highest standard ensuring the integrity of your work is upheld through unsurpassed product quality.

Our design is also purpose built for the local market giving you a larger, tougher product that is easy to handle and quick to install.

## 02 / Factory tested and Certified to Australian Standards and GBCA requirements

All WireByClick products are tested and certified to AS/NZS Standards. We use Australian made cable from Australian owned companies that are certified to the GBCA PVC Best Practise 'Pathway 1' requirement. Additionally, each WireByClick fly-lead is factory tested at the point of manufacture to ensure its functionality when it gets to you on site.

## 03 / Seamless Integration with MLEX solution

WireByClick product can be combined with the MLEX product to offer a comprehensive modular solution capable of modularising almost every aspect of the electrical install. See pages 8-11 for more details on how WireByClick and MLEX can combine to create an easy to install modular solution for both light and power.

03

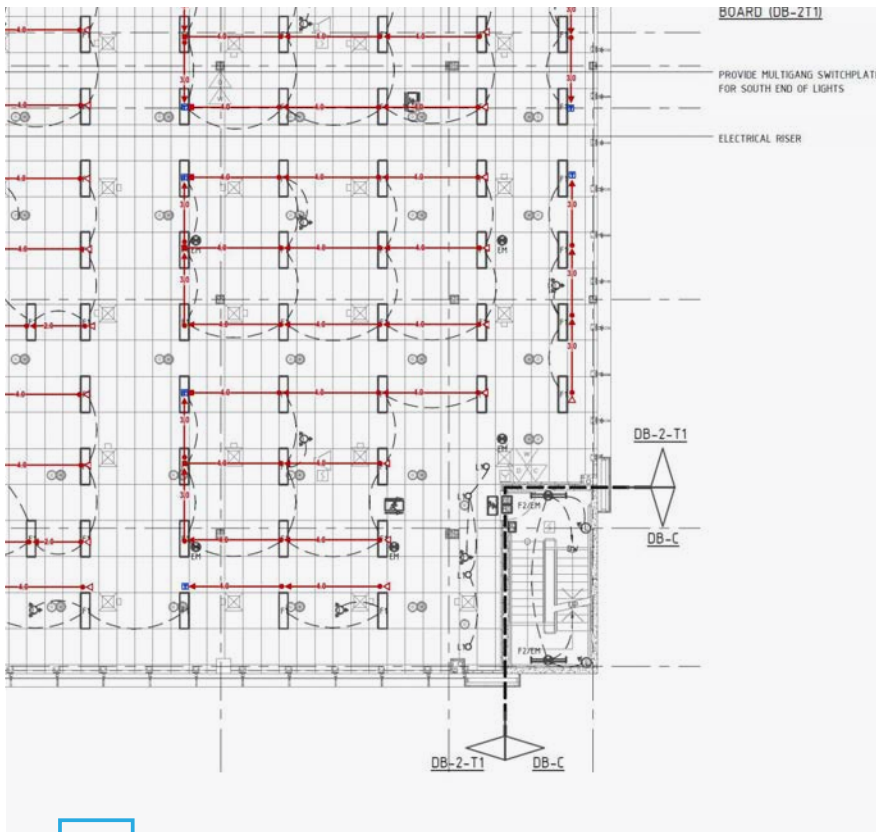

---

# RELIABLE, PROACTIVE SERVICE

---

**Our service solution is based on transparency, honesty and reliability. We provide as much information as we can, as early as we can, making sure you have full visibility to key determining factors such as design, cost and availability. We are dedicated to doing all we can to share the responsibility of a successful, well planned and well executed modular install.**

01

## 01 / Detailed Drawing Service

Our service solution is underpinned by our detailed drawing service. Our team of drawing engineers mark up existing PDF or DWG files in accordance with your project's specific requirements. The drawings are simple to read with each individual product displayed, colour coded and clearly marked to show the cable length. The colours not only help to differentiate between individual products on the drawing itself, but also correspond directly with the packaging labels for easy distribution on site.

The drawings are a great medium that can be utilised effectively at every stage of the project from estimating and procurement through to the install of the product.

## 02 / Easy Pick Packaging

Our packaging solution makes it very easy to work out what the product is and where it needs to go once delivered to site.

The marked up drawings are the blue print for the site team on what has been delivered and how it is to be installed.

02

03

The product packaging is clearly marked with matching labels that feature the same colour coding, images and product codes as found on the marked up drawing. So it is simply a matter of handing the drawings to the team and letting them get to work.

## 03 / Short Lead Times

Our Australian based manufacturing model means that we have the capacity to offer very quick turn around on all fly lead orders. This means that we are well positioned to assist you at short notice to get your product when you need it.

---

# FAST, SAFE INSTALL

---

There are specific design distinctions that make the WireByClick product unique to the modular wiring landscape. Our range incorporates many practical design elements that combine to deliver significant advantages to our users where it matters most, on site.

01

## 01 / Standard 3Pin Outlet

Our standard 240v (3Pin) solution incorporates a standard 3Pin outlet to facilitate the direct connection of the typical off the shelf AUS/NZ 3Pin flex and plug. This means you will eliminate the additional costs associated with the extra flex and plug whilst also saving the time required to facilitate the free issue and fit off of leads with the light manufacturer.

## 02 / Stackable 5Pin Luminaire Lead

Our stackable 5Pin flex and plug (LA1025/5) means that you can limit the amount of connections in the backbone loom saving to an absolute minimum (1 backbone loom connection per every 4 fittings). This means less parts to manage, less time to install each loom and achieving maximum integrity of the circuit through reduced connections. The light fittings arrive to site pre fitted with the WBC Stackable luminaire lead where they can simply inter connect at each designated outlet with the additional support of the STAKA/6 install accessory.

## 03 / Custom Lead Lengths

Our ability to manufacture custom lead lengths means that we can truly design and deliver a customised modular solution specific to any job. Custom lead lengths will eliminate costs associated with unnecessary cable usage whilst also saving the time associated with looping the excess cable at each outlet.

**02****03**

## Doing More With Modular

MLEX is an effortless extension of our WireByClick commercial lighting product that offers it users the chance to further expand the advantages of modularisation to almost every aspect of the electrical install, from the switchboard through to the GPO or light switch. The MLEX solution uses minimal parts to achieve a wide variety of outcomes and our lead lengths are totally customisable allowing for absolute precision and efficiency on site. The rewirable component of the range allows you to make your own leads using off the shelf cable which ensures you are always in control of the install.

02

## 01 /MLEX For Power

MLEX achieves a compact <25mm diameter that means it can be utilised in almost any installation.

The option for pre fitted enabler leads means that GPO's can arrive to site fully prepared for a direct modular connection to the existing MLEX backbone.

## 02 /MLEX From The Switchboard

The MLEX solution allows for our modular solution to be utilised from the switchboard onwards. MLEX leads can be hardwired into the switchboards on site or the boards can be prewired offsite using our Panel Mount Outlet allowing for only quick and easy modular connections on site.

## 03 /MLEX Incorporating Switching

The MLEX solution offers a comprehensive array of switching options utilising any combination of specialist switching products. The option for pre fitted enabler leads means that switches can arrive to site fully prepared for a direct modular connection to the existing MLEX/WBC backbone.

## 04 / WBC For Commercial Lighting

The seamless integration of the MLEX solution into the WireByClick solution means that all, some or none of the additional MLEX wiring options can be incorporated into your next WireByClick commercial lighting design.
