

□ LARGE HOSPITAL PROJECTS □

VICTORIA HEART HOSPITAL

Situation

Being a large complex project, multiple trades all working in the same areas at once causes inefficiencies while trying rough in electrical cabling in ceilings and walls. The risk of fault rectification during the commissioning stage presents a serious threat to program and budget.

Task

To supply a plug and play system which not only saves time for the install but reduces onsite labour and risk. Additionally, we want to create confidence for the customer by providing a strong supply chain being a local, Australian made manufacturer ensuring they have exactly what they need, and when they need it.

Action

Provide a full set of circuited electrical shop drawings to manufacture a tailored solution which was efficient and met the exact requirements of the customer.

Result

A bespoke solution which minimised onsite handling and allowed the install team to commission with confidence.

Client
Stowe Australia

Project Scope
Turnkey soft wiring solution for light and power

Location
Melbourne VIC

Products Used
100+ boards, 7,000+ Lights and 6,000+ Power points

Tags
Health, Light, Power, WBC, MLEX

"The products were simple to use, the plug-and-play design significantly reduced the install time, allowing us to expedite works in areas that wouldn't be possible with traditional wiring systems."

Michael Bruns Project Manager - Stowe
