

□ LARGE COMMERCIAL PROJECTS □

25 CATALINA DRIVE

Situation

25 Catalina Drive is a new office development that is environmentally sustainable being 100% electric and holding a 5-star Green Star award. Fredon ACT were looking for a fast and effective modular product to provide lighting to the development.

Task

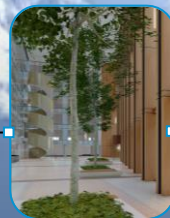

To provide a modular lighting solution, that is both fast and efficient while also being of high quality to reduce onsite labour costs and reduce risk.

Action

Free issued 4,700 luminaire leads to the lighting supplier for fit off and delivered 1,350 backbone modular leads direct to site for install.

Result

As the products are made locally in Australia it reduced lead times significantly, allowing Fredon to expedite works as the construction program allowed to do so. Being a plug and play, pre-tested solution reduced commissioning time significantly which was a significant saving.

Client
Fredon ACT

Project Scope
Provide a high-quality modular lighting system

Location
Canberra Airport, ACT

Products Used
4,700 luminaire lights/sensors
1,350 Backbone modular leads (AT Leads)

Tags
Commercial, Light, Wire By Click

"The MyModular system is user friendly and a high-quality product. Being locally made in Australia, we have confidence in both their supply chain and their team to deliver what we need and when we need it."

Tim Woods | Project Manager | Fredon ACT
