

□ LARGE COMMERCIAL PROJECTS □

VICTORIA PLACE

Situation

In Melbourne's East is a brand-new office building with 25,000 square meters. Victoria Place received a 5 Star Green Star Design certification and a 5.5 Star NABERS Energy rating. AppsElec was looking for a modular lighting solution that is quick and efficient to install.

Task

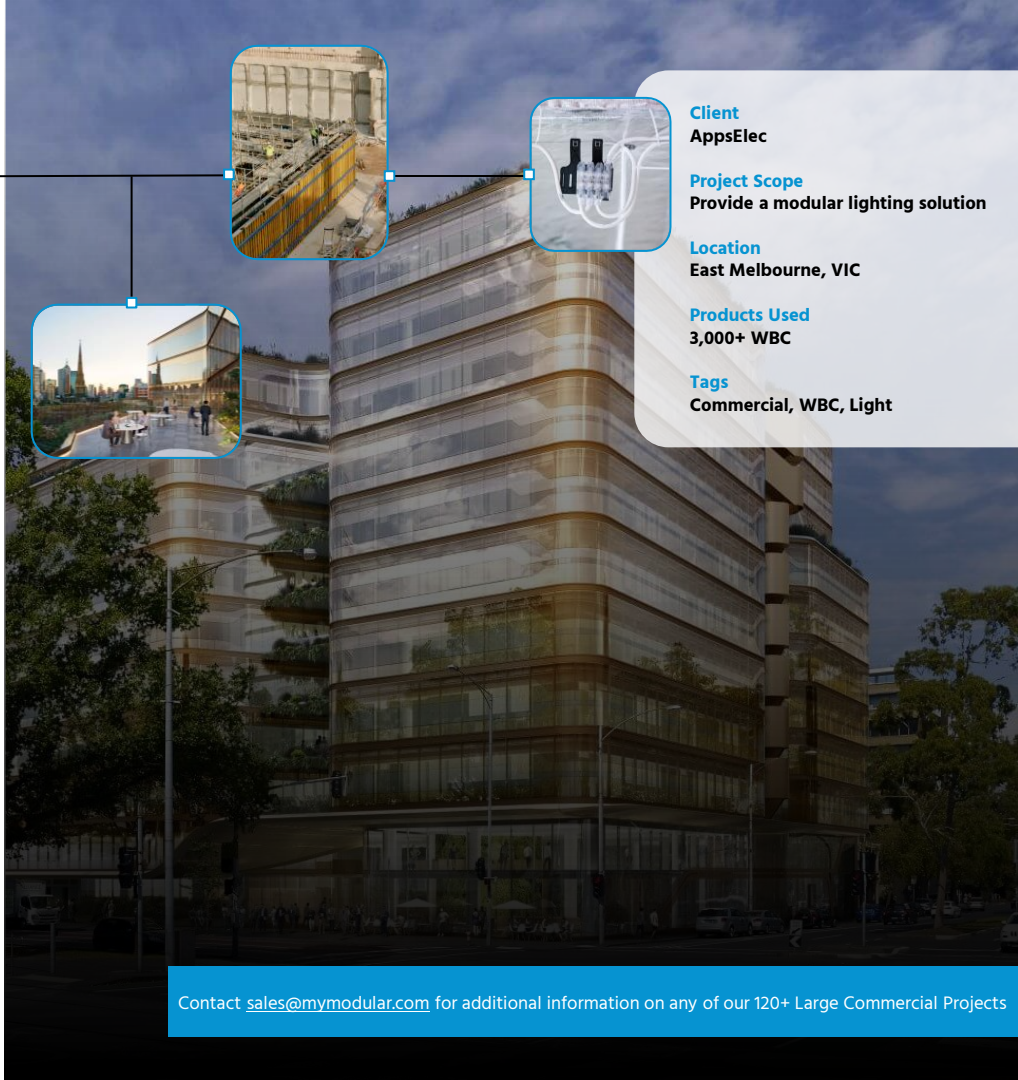

A professionally installed low voltage, plug-and-play lighting system was implemented in the new space, effectively mitigating the risk of electrocution during and after construction. The use of a pre-tested modular lighting solution instilled confidence in its reliability and performance.

Action

Over 3,000 WBC lighting solutions were supplied to the project, with all products locally manufactured, resulting in significantly reduced lead times.

Result

The WBC lighting solution offered efficient and safe installation in Victoria Place. Locally manufactured and pre-tested, it reduced lead times while ensuring reliability. AppsElec now enjoys a low voltage, plug-and-play lighting system, promoting safety and energy efficiency.

Client
AppsElec

Project Scope
Provide a modular lighting solution

Location
East Melbourne, VIC

Products Used
3,000+ WBC
