

MODULAR PROJECTS

Cabn Accommodation Pod

Situation

RJE Global approached MyModular requiring a turn-key modular solution, including a pre-enabled switchboard, enabled power points and lighting accessories.

Task

We determined that MLEX is the most suitable option for this project's scope because it provides both lighting and power from a single unit. Its straightforward installation, in line with our standards, has significantly reduced installation times.

Action

Manufactured all necessary products for RJE Global to complete the project. With both businesses located in South Australia, lead times were greatly minimized.

Result

As a local manufacturer, we delivered products with short lead times, enabling our customer to effortlessly meet their deadlines. Installation times were nearly halved, thanks to our plug-and-play technology.
