

## □ LARGE HOSPITAL PROJECTS □

# TQEH

### Situation

Stage 3 of The Queen Elizabeth Hospital (TQEH) redevelopment electrical package was given to Nilsen SA, in MyModular's own back yard of Adelaide. The upgrade consists of a 5-level contemporary building spanning 27,000sqm which allows for the relocation of services from the existing tower which was building in the 1950s.

### Task

MyModular received a list of materials from Nilsen to manufacture white DALI leads.

### Action

Both essential and non-essential 5-pin cabling were produced over several months. MyModular did not provide any drawings since the customer specified the required lengths.

### Result

MyModular successfully delivered all leads to the site within the customer's specified delivery timeframes, enabling Nilsen to smoothly execute their scope of work.

**Client**  
Nilsen SA
